Combining 35 Years of Clinical Wisdom with the Power of Artificial Intelligence

Artificial Intelligence is rapidly transforming healthcare, and homeopathy is entering a new era of clinical intelligence. This intensive workshop demonstrates how Artificial Intelligence can become your clinical assistant throughout every stage of homeopathic prescription—from clinical evaluation and symptom analysis to repertorization, Materia Medica comparison, miasmatic evaluation, and final remedy selection.

Developed by Dr. Aalim Dhandhukia after more than 35 years of clinical practice, homeopathic education, and systematic case analysis, this course presents a practical AI-assisted workflow that enhances efficiency while remaining firmly rooted in the timeless principles of classical homeopathy.

AI does not replace the physician—it empowers the physician.

What You Will Learn

- AI-Assisted Clinical Evaluation
- AI Based Scientific Symptom Analysis
- AI for Scientific Case Processing
- AI & Classical Repertorization
- AI-Assisted Repertorial Analysis
- AI & Materia Medica Analysis
- AI-Based Remedy Differentiation
- AI-Assisted Miasmatic Evaluation
- AI for Final Remedy Selection
